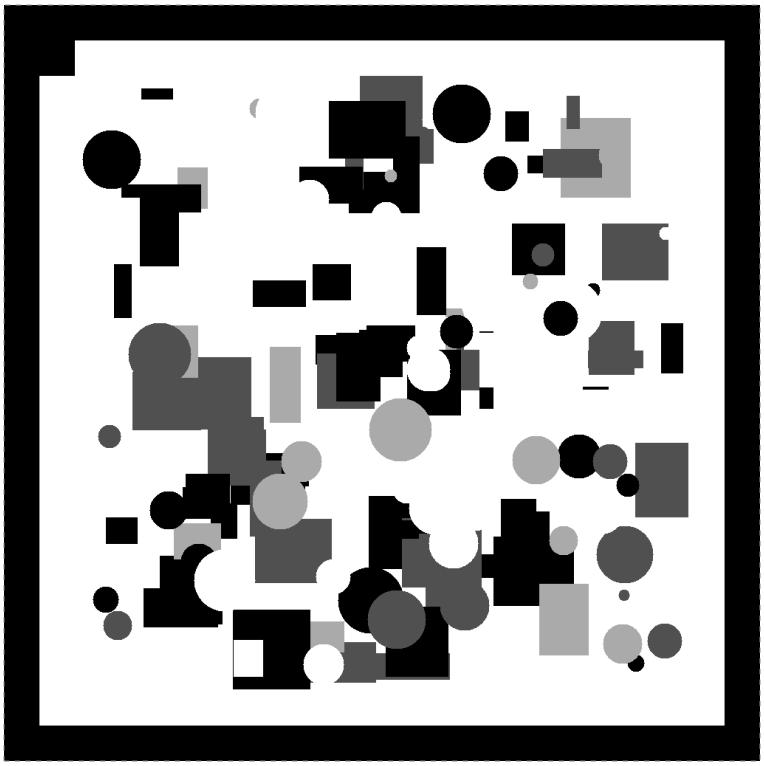
PROXY DockMarker (Field Unit 100)

Print at 100% / Actual Size. Never 'Fit to page'.

TOP EDGE: toward the pins



Fits the sync-dock pocket; black notch at top-left as read from the front

This line must measure exactly 100 mm. If not, check the print scale.

1. Cut exactly along the black border (no white margin): 100.0 mm square.
2. Glue to stiff card (≥1 mm) so it lies flat on the corner guides.
   Trim the card flush with the print. Paper alone sags between the guides.
3. Drop it into the sync-dock pocket, upright as read from the front:
   top edge toward the pins, black notch at top-left. The pocket walls register it.
4. Matte paper only. In the app, pick the "Field Unit 100" setup.

The app assumes the printed face sits 1.2 mm above the guides (1 mm card + paper + glue).
Thicker card: lower Y by the extra thickness in the debug panel.
